

North American Dispense Systems, Inc.

Important Facts:

Now you can enjoy the delights of real draught beer. Perfect for parties, picnics, social gatherings and holidays.

Any Time—Anywhere

Once the Maverick Pump is installed you are ready to pour the first beer...

Don't Pump: Open the faucet (quickly and all the way) and allow the beer to flow. You may find at first the flow of beer is faster than desired. This is normal and due to the CO2 pressure in the ball.

Don't Overpump: Only pump when the beer flow begins to slow. The number one problem once a ball is tapped is OVERPUMPING or NO PUMPING. Both cause problems.

IMPORTANT NOTE: It is necessary to keep your beer refrigerated. When using ice, fill carton at least three-quarters full.

BEER SHOULD NOT BE LEFT AT ROOM TEMPERATURE FOR ANY LENGTH OF TIME. DO NOT REMOVE BEER FROM BOX.

Part # Description

- 70423 Locking Ring
- 70424 Rubber Pump Bulb
- 70428 Body Assembly
- 70503 Hose/Faucet Assembly

Maverick Pump Cleaning and Installation

INSTALLATION

1 WET METAL TUBE AND POSITION PUMP IN EITHER POCKET. REST PALM OF HAND ON PUMP AS SHOWN. WHILE HOLDING IN POCKET, STRIKE SHARPLY WITH OTHER HAND TO BREAK SEAL. CONTINUE TO PUSH DOWNWARD UNTIL SHORT TUBE RESTS IN OTHER POCKET AND BREAKS SEAL.

2 BEFORE PUMPING, OPEN FAUCET TO START FLOW OF BEER. ONLY PUMP WHEN BEER FLOW SLOWS.

DO NOT OVERPUMP

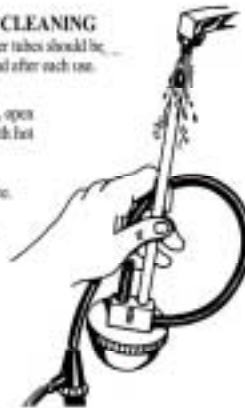

CARE AND CLEANING

Beer line and water tubes should be cleaned before and after each use.

To clean beer line, open faucet and flush with hot water as shown.

Store in a dry place.
